MCR SAFETY

MAX is how we're different!

Manufacturer – We manufacturer gloves, glasses, and garments. Our expertise as a supplier has been fine-tuned by our vertical integration. For example; we source Kevlar® fiber directly from DuPont and spin our yarn to knit an assortment of cut protection gloves. We have our own leather tannery that supplies our cut and sew operations for leather gloves, sleeves, and garments. Our knowledge as a manufacturer helps us evaluate other sources of supply to assure reliable quality and competitiveness.

Advocate for safety – Our leadership team is actively engaged with the International Safety Equipment Association (ISEA), the International Glove Association (IGA), the National Safety Council (NSC), and the Voluntary Protection Program Participants Association (VPPPA). As participating members, we contribute to the creation of industry legislative guidelines and safety standards. We offer classes for OSHA certification and a broad range of PPE distributor training.

Xperts in the field – We market in a multitude of unique methods to serve our distributors. Such as:

- Focus Groups – We maintain a diverse industry assortment of international and regional businesses to engage in product development and evaluation.
- End User Events – We engage in a variety of end user events and tradeshows to expedite product introductions, create product awareness and drive demand.
- Supporting a safer work place – Whether it is on the shop floor, an oil rig or construction site, we're there providing solutions to workplace hazards. We are the original sponsor of EHS Today Safety Leadership Conference which engages companies that are committed to reducing injuries and creating safer work places.

We Protect People!

INTEGRITY • CREDIBILITY • ACCOUNTABILITY • MCR SAFETY

MAX is Your Protector!

When you see MAX on our gloves, glasses and garments you know that you have the toughest, most reliable, hard working gear.

We globally manufacture and distribute safety gear marketed as:

Cut Protection Selection

ANSI/ISEA and EN388 Cut Levels are NOT Interchangeable.

To capitalize on today's technology and innovation, you need to understand our industry's test methods. Each test method has unique processes and testing equipment (see diagrams for more explanation). Therefore, it is difficult to make comparisons with each of these test methods and results (scores).

Understanding the ANSI/ISEA 105 Standard Specific to Cut Protection

ANSI Cut Protection Test Rating Systems

The American National Standards Institute and the International Safety Equipment Association have recently updated our industry's ANSI/ISEA 105 Standard. Effective early 2016, this updated standard will provide the criteria to better identify levels of cut protection, abrasion, puncture, chemical, heat, vibration, and dexterity. Much of our industry's attention will be directed toward enhancements in cut protection levels.

These changes are necessary to help our industry move toward establishing an international test method for cut protection. The new test method designation is F2992/F2992M-15. Note going forward there will be nine (9) levels of cut protection performance as opposed to six (6) from the previous test method. Additionally, all levels will reference "A" as a prefix to identify compliance with the new standard.

ANSI/ISEA 105 (2005/2011)		ANSI/ISEA 105 (2016)	
Old Cut Level Rating	Weight (grams) needed to cut thru material*: ASTM F1790-97 or ASTM F1790-05	Weight (grams) needed to cut thru material**: ASTM F2992/F2992M-15 (20 mm of blade travel)	NEW Cut Level Rating
0	< 200	n/a	n/a
1	≥ 200	≥ 200	A1
2	≥ 500	≥ 500	A2
3	≥ 1000	≥ 1000	A3
4	≥ 1500	≥ 1500	A4
5	≥ 3500	≥ 2200	A5
n/a	n/a	≥ 3000	A6
n/a	n/a	≥ 4000	A7

Watch for new test scores and product enhancements to be endorsed on our cut protection offerings as inventory is replenished.

New Icons ANSI A2 ANSI A3 ANSI A4 ANSI A5 ANSI A6 ANSI A7 ANSI A8 ANSI A9

NOTE: We DO NOT Promote ANSI Level 1 or A1 for Cut Protection

Understanding the EN388 Standard Specific to Cut Protection

European Standard EN388 Changes Pending

A revised European directive to harmonize standards for PPE items and mirror more closely the ANSI/ISEA methods is pending. The most significant change would involve cut resistance test methods to more closely match the revised ANSI/ISEA 105 standard. The European Standard EN388 includes four physical tests required for gloves. Our literature and industry identifies this testing information with CE and a four digit number. Each number represents an individual test for abrasion, cut, tear, and puncture.

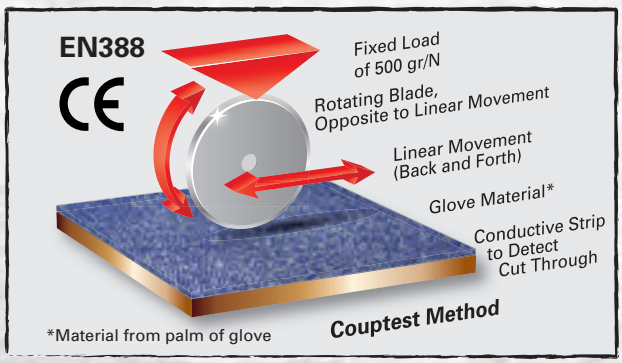
The cut test uses a circular blade under a fixed load, moves back and forth until cut through is achieved. This is conducted on Coupstest equipment and is unique to CE testing methods. EN388 or CE test results do require third party certification.

Consider the acronym ACT-P as a convenient reference to remembering the four physical tests.

CE 4543

Abrasion Resistance Rating (Between 0-4)
Cut Resistance Rating (Between 0-5)
Tear Resistance Rating (Between 0-4)
Puncture Resistance Rating (Between 0-4)

Criteria		Performance Guide for EN 388:					
	Performance Level	0	1	2	3	4	5
A	Abrasion Resistance (Cycles)	< 100	100+	500+	2000+	8000+	n/a
C	Blade Cut Resistance (Index)	< 1.2	1.2+	2.5+	5.0+	10.0+	20.0+
T	Tear Resistance (Newtons)	< 10	10+	25+	50+	75+	n/a
P	Puncture Resistance (Newtons)	< 20	20+	60+	100+	150+	n/a



Diamond Technology - Cut Protection

Unique Features of Dyneema®

- **Cool** - One of the most distinguishing characteristics is its cool to touch property. Dyneema® fiber's inherent agility to dissipate body heat and keep hands cooler. This unique feature allows consumers greater comfort with high levels of protection.
- **Cut** - Only DSM-Dyneema® produces Dyneema® Diamond Technology, the highest performance fiber solution for cut protection. Dyneema® Diamond Technology gloves are thinner and lighter weight while providing higher levels of protection and greater dexterity.
- **Cost** - Day after day, wash after wash, gloves made with Dyneema® are on the job long after other gloves are worn out. Studies endorse the extended wear of Dyneema® can lower your hand protection cost. High level abrasion properties extend the life cycle of these gloves.
- **Confidence** - Because of the "Licensed to Protect" program, end-users know that they can trust Dyneema®-branded products.
- **Consistency** - Dyneema® is the fiber of choice for the most critical applications, like ballistic protection and bio-medical implantation, where there is no room for inconsistency.

Cut Protection - DuPont™ Kevlar®

DuPont created a cut resistant material known as a para-aramid for comfortable hand and arm protection. Para-aramid products are available in the form of spun, textured, and continuous filament yarns. These para-aramids are non-combustible, lightweight and have the ability to withstand temperatures of up to 900° F. Its tensile strength is 5 times stronger than steel in its ability to withstand the amount of tension applied.

Unique Features of Kevlar®

- 5 times stronger than steel on an equal weight basis.
- Inherently non-combustible and recommended for heat applications.
- Kevlar® fiber is well suited for grip.
- Can be coated with a wide range of polymers.
- Launders well with exception to bleach.

FEATURES ***/ Cut Resistant / Lightweight and comfortable / Flame resistant (will not melt) / Complies with FDA regulations for direct food contact / Available in a wide range of styles / Washable (do not use bleach) and long wearing***

STEELCORE® II / SURVIVOR™ - Cut Protection

Steelcore® II / Survivor™ - Two strands of stainless steel wrapped with a soft knit yarn for a comfortable fit. PVC coating is also available on one or two sides. This product is cut resistant, not cut-proof or puncture-proof. It is not recommended to use with serrated or moving blades. Sleeves available in 12, 18, 21 inch lengths.

Features: cut resistant, complies with FDA regulations for food contact, reversible patterns, launderable.

Applications: Food processing, canning operations, glass handling or metal fabricating.

Component materials of all Steelcore® II and Survivor™ products comply with all relevant federal regulations for food contact.

All Steelcore® II and Survivor™ products are launderable.

Cut Protection - Alycore™

Alycore™ is the choice for Extreme Performance and Extraordinary Protection. Our Alycore cut protection offerings combine a patented technology for this material and a patent pending design for the protection zone coverages. These styles offer the highest levels of cut protection with greater than 6000 grams of performance and ANSI A9 cut level. These Alycore offerings fueled the changes to increase the ANSI cut level standard which now reflects higher levels of protection. This revolutionary technology exceeds A9 level cut protection which allows us to reduce even more workplace injuries than previously in the past. Our Alycore styles provide the highest levels of cut, puncture, and needle-stick resistance in gloves and sleeves.

Things to Consider When Choosing a Lens

- Protective eyewear is available in a variety of tinted lenses as well as clear. These tints are not merely decorative, but are designed to enhance the workers vision under various lighting conditions.
- The amount of visible light that passes through each lens and how the lens tint affects vision are important factors in lens selection.
- Luminous (light) transmission, amount of visible light passing through a medium (a lens in this case) is important. The American National Standards Institute (ANSI) provides guidelines for clear and filter plano (non-prescription) lenses in its Z87.1-2015 edition.
- For instance, the luminous transmission of a clear lens must be between 85% and 100%.
- All Crews and U.S. Safety styles absorb 99.9% of UV radiation.
- Noted styles also meet Military MIL-PRF-31013 Test Regiment for High Velocity Impact Protection.

Lens Coatings
- **Duramass® Hard Coat**—Our standard scratch resistant coating
- **Duramass® Anti-Fog Coat**—Our standard anti-fog coating
- **MAX3™ Hard Coat**—Three times the scratch resistance than traditional coatings for US Safety Glasses
- **MAX6™ Anti-Fog Coat**—Six times the anti-fog properties than traditional coatings for US Safety Glasses
- **BossMan™**—High quality mirror lens coating for US Safety Glasses (Includes **Duramass® Lens Coatings**)

Anti-Fog Coating
- **Duramass® AF and MAX6™** coatings provide anti-fog, anti-static, anti-scratch, and 99.9% UV prevention.
- To be used in high humidity environments, hot or cold weather, or where sudden shifts in temperature occur.
- Provides excellent fog preventing properties.

Clear
- 90% of light is transmitted – the remainder of light is blocked by the coating on the lens.
- Provide excellent optics for general applications.
- Most popular lens because it allows the majority of light to pass through the lens while not distorting the visible color spectrum.
- General purpose providing maximum impact protection and maximum visibility.

Amber
- 80% of light transmitted.
- Excellent for maximum contrast enhancement, particularly in low light situations.
- The amber lens color blocks virtually all blue light to reduce haze and glare making all blue look black or gray.
- The disadvantage is that when you eliminate blue light, you distort color recognition.

Light Blue
- 68% of light transmitted.
- Option to Indoor/Outdoor lens.
- Reduces glare from artificial light such as halogen and fluorescent.

Orange
- 57% of light is transmitted.
- Reduces eye fatigue by absorbing blue and green light.
- Excellent for indoor and low light applications; cloudy or hazy days.
- Enhances visual contrast to improve depth perception.

Vermilion
- 55% of light transmitted.
- This lens reduces the light proportional to the way your eye sees it. It reduces all colors equally allowing for optimum color recognition.
- It works to reduce brightness while maintaining color.
- Great for electricians, computer applications as well as outdoors where all color must be observed and not distorted.

Indoor/Outdoor Clear Mirror
- 36% of light is transmitted.
- Clear lens with a mirrored coating on the outside.
- Allows more visible light through than other tinted lenses and may be used indoors.
- Best for workers going inside to outside, like forklift drivers, for reducing glare from artificial light such as halogen and florescent. Lens is not transitional.

Brown
- 13% of light transmitted
- Distinguishes color while reducing glare and brightness for outdoor applications. Meets the traffic signal recognition requirements of ANSI Z80.3.
- Commonly used in construction or outdoors where sunlight and glare cause eyestrain and fatigue.

Gray
- 13% of light transmitted.
- Reduces the amount of light that passes through the lens.
- Commonly used in construction or outdoors where sunlight and glare cause eyestrain and fatigue.

Polarized
- 13% of light transmitted.
- Reduction of reflected light (glare).
- Improves optical clarity.
- Enhances contrast and depth perception.
- Minimizes eye fatigue.

Mirror – Silver, Blue, Fire, Emerald, Black, and Blue Diamond
- 9%-13% of light is transmitted.
- Gray lens with mirrored coating on the outside.
- Commonly used in construction or outdoors where sunlight and glare cause eyestrain and fatigue.
- The "mirror" coating reflects light reducing the amount of light that passes through the lens.

Filter Shade Lens
- Filter shades lenses protect against ultraviolet and infrared radiation that is generated when working with molten metal and in welding, cutting, soldering, and brazing operations.
- Filter shades are marked with a number on the lens indicating the shade number.
- Available in Green or Gray lens options.
- Gray Infrared (IR) filters for true color recognition.
- Gray Filter 3.0 lens 12% of light is transmitted.
- Gray Filter 5.0 lens 2% of light is transmitted.
- Green Filter 2.0 lens 30% of light is transmitted.
- Green Filter 3.0 lens 12% of light is transmitted.
- Green Filter 5.0 lens 2% of light is transmitted.

Welding Filter Shade Section

Operation	Recommended Filter Shade
Torch Soldering	2
Torch Brazing, Soldering	3
Light Cutting up to 1"*	3
Medium Cutting 1" to 6"*	5
Heavy Cutting more than 6"*	5
Gas Welding, light, up to 1/8"*	5
Gas Welding, medium, 1/8" to 1/2"*	5

*Indicates thickness of material to be cut.

- MCR Safety recognizes that these are general definitions and recommends you should always consult with your safety director at the facility where the products are to be used to insure the proper application.

U.S. SAFETY GLASSES

U.S. Safety glasses are designed to provide solution-based eyewear protection. This brand is distinguished with application based, stylish design elements and superior coatings for work and play.

Our Superior Coatings Include: MAX3™, MAX6™ and BossMan™.

MAX3 3X GREATER SCRATCH RESISTANCE

- *Superior Hard Coating Provides 3 Times More Scratch Resistance than Competitive Offerings.*
- *Abrasion Resistance up to 600g Weight Without Scratching (current industry performance is 200g).*
- *Passes EN166 K Mark Test for Scratch/Abrasion.*

MAX6 6X GREATER ANTI-FOG PROTECTION

- *Superior Anti-Fog Coating Provides 6 Times Better Anti-Fog Performance than Competitive Offerings.*
- *In Extreme Fogging Conditions, MAX6™ Remains Clear or Fogs for No More Than 10 Seconds, While Current Industry AF Offerings Take 60 Seconds or Longer To Dissipate.*
- *Passes EN166 N Mark Test for Anti-Fog.*

VCL3SL Sizes: L-X4
Value Class 3, ***Solid*** 100% Polyester Safety Vest, 2" Silver Reflective Stripes, Hook and Loop Front Closure, 2 Outside, 1 Inside Pocket, Fluorescent Lime.

Limited Flammability Class 2 Vest

Limited Flammability – Items that are considered as having "limited flammability" properties have been tested using Test Method ASTM D6413 to observe the materials reaction to open flame. This is not a standard. **These materials may melt and/or burn** when in contact with flame, but will self-extinguish within a matter of seconds once the source of the flame is removed. By self-extinguishing, these materials will help reduce the potential of further burn injury as compared to other garments that are not treated.

Limited Flammability items should not be used as protection from Flash Fire or Electric Arc, always wear appropriate FR Clothing.

WCCL2LFR Sizes: M-X4
Class 2, 4 ½" Orange/2" Silver Reflective Stripes, Zipper Front, Limited Flammability, Fluorescent Lime.

General Purpose Safety Vests

General Purpose Class Protection Work Conditions
General Purpose vests do not meet the requirements for performance level classification by ANSI standards.
GP Vest are to be used for occupational activities where Class 1 protection is not necessary. GP vests are designed to give the wearer additional visual conspicuity beyond that of normal attire.

MCR Safety recommends the use of Value Series Class 2 vests for any Class 1 requirement.

Should you need assistance in determining the most appropriate garment for any application, please contact MCR Safety (www.mcrsafety.com) or ISEA (www.safetyequipment.org).

General Purpose Class Industry Applications:

- Yard maintenance workers
- Crowd control
- Warehouse workers
- Construction
- Parking lot attendants

INCIDENT COMMAND VESTS

Many of today's environments require the quick identification of individuals coordinating or involved with site activities. Although incident command vests were initially designed for responders to disasters or hazardous situations, they are used in a wide variety of applications. These vests are used to help quickly identify the person or persons responsible for a particular area.
